Another word for sea life

Asked to think of beach-related words or phrases, most people throw out things like ocean, saltwater, palm trees, boardwalks, seashells, possibly a cocktail or two. While these are definitely great ways to describe the beach, there are plenty of other interesting and important terms that all beach lovers should know. We've outlined fourteen of these terms for you to know and use on your next trip. 1. Flotsam When shipwrecks or treasures from the sea drift up to shore, it's known as a flotsam. So, when you find a boat washed up suddenly one day on the sand, that's a flotsam. 2. Jetsam Jetsam is the opposite of flotsam. This is when things are intentionally thrown overboard to help lighten a boat's load. 3. High Tide True to its name, high tide is when the tide is at its highest point. It can be choppy and rough but it's also often the best time to go sailing and fishing. 4. Low Tide Low tide is the lowest point of the tide. When the tide draws back due to the intense gravity of the moon, it shows all the hidden treasures beneath the ocean you can explore for a bit, like tide pools and sandbars. 5. Sandbar Also known as a shoal, a sandbar is a large ridge of sand built up by currents. In other words, it's basically just a small platform of sand that descends into the middle of a body of water. At low tide you can usually walk out on it. 6. Beachcomber Do you enjoy walking along the sand searching for shells or other signs of sea life? What about taking metal detectors out and trying to find buried treasure in sand? If you do, you're a beachcomber, or in other words, someone who enjoys scavenging along the sand looking for things. 7. Whitecaps If you look out at the ocean you'll more than likely see faint white lines everywhere. This isn't some trick of the sun, but rather whitecaps. These outline the tips of small ocean waves with foam which adds a nice contrast to its blue water. 8. Seamark Also known as a beacon, seamarks are the large and often colorful objects you see floating out in the middle of sea. They're designed to help boaters navigate the sea better by avoiding things like dangerous currents and low water levels. 9. Lagoon While it has a rather comical sounding name, a lagoon is actually a quiet body of saltwater that's separated from a larger body of water by a sandbar. These hidden spots often have beautiful shades of blue water and mysterious sea life which makes them a beach lover's dream to find. 10. Ebb Tide Ebb tide is the period between a high and low tide. It's a peaceful time where you can walk along the sand by the edge of the ocean without fear of the tide suddenly rushing up on you. 11. Sand Dune If you do a lot of beach hiking or enjoy lounging in uninhabited beach settings, you've probably come across sand dunes. These are towering piles of sand created by the force of the wind. They provide natural protection and a beautiful rugged look to the surrounding landscape. 12. Breakwater A breakwater is long barrier that helps to protect the shore from massive waves. It's also similar to a jetty, which is a long line of boulders that extend out into the water to prevent the shore from ocean destruction. These also can help boats out in the water see where the shore is better and can act as a pier for them. 13. Undertow Undertow is just another name for a rip current and can be one of the most dangerous parts of the ocean. These swirling masses of water spiral down into the sea and can be a deadly trap for swimmers who don't realize they are caught in one. 14. Thalassophile If you're reading this, you're probably an ocean lover. Or in other words, you're a thalassophile, someone who loves the ocean. As a thalassophile, you can use these words to help you better connect to the beach and enjoy the beauty it has to offer even more. BEach Happy and Knowledgeable! Discover more about beaches, beach living and the beach lifestyle that 30A.com features every day. Facebook and Instagram are great places to start. Friendly, vicious, adorable, cute, fuzzy, smelly, obedient, loyal, protective, smart, ferocious, muscular, quiet, long, lean, well chiseled, short, strong, massive, square, clean, lively, high-spirited, shaggy, smooth, wily, intelligent, obedient, knowledgeable, exuberant, playful, splendid, faithful. Whether you are interested in exploring more about the sea or looking for ocean words to use as a vocabulary for your class, having a comprehensive list of ocean words can be handy. Dive into the deep depths of the ocean through some unique and interesting ocean vocabulary covering beaches, creatures, seas, plants, and more. Ocean waves breaking on beach The oceans and seas are vast. They are full of wonders that we are still discovering. In fact, the National Ocean Service points out that more than 80% of the ocean is unknown. Could you imagine those crazy wonders hiding in the deep depths? Well, there are a few areas that are known. Dive into a list of common sea and ocean words! buoy - floating object in the sea to serve as a warning or guidebrine - salty watercurrent - directed movement of sea waterdead zone - spots in the ocean with low oxygen and lack of sea lifedeep blue sea - description of sea waterdeepwater - water of great depthestuary - spot where the river meets the seahurricane - tropical cyclone that forms over the Atlantic Ocean or the Caribbeaninlet - thin area of water coming from a larger bodyisle - islandloch - arm of the seanautical - relating to ships or the seaocean floor - the bottom of the seaocean water - water in the seaopen sea - sea that is away from landsaltwater - brackish water with high salt contentsalty - having high saline contentseacoast - land that touches the seaseaway - ocean travel routeseven seas - all the oceans of the worldsurface water - top layer of the oceantide pool - pool revealed in rocks when the tide goes outtsunami - tidal wave When it comes to the vegetation filling our waters, it is unique to say the least. One of the heroes of the deep sea is plankton, which is made up of tiny plants and animals floating with the sea. These microscopic wonders set up the base for the marine ecosystem. While there are different species out there, plankton typically fall into two different types: zooplankton (animals) and phytoplankton (plants). Beyond just the food chain superstars, you also have wonders like the Great Barrier Reef. Splash around a few other plants of the ocean words like: algae - aquatic plants including seaweedbacteria - single-celled organismsgullweed - brown seaweed also known as sargassumkelp - large type of brown seaweed with long stripsred algae - a red type of seaweedseagrass - underwater flowering plants It's time to swim down in the depths now by looking at sea creature words. Not only do you have the unicorn of the sea in a narwhal but unique array of all different kinds of fish. There are even those really creepy creatures that only in the darkest depths like the anglerfish with its glowing lure. Wade in with some other fun ocean creature words in this list. abalone - mollusk found in warm seasbarracuda - predatory tropical saltwater fishbarnacle - a crustacean that attaches to structures such as boat hulls, rocks, and docksblowfish - fish that can inflate its bodyclownfish - brightly colored, striped tropical fishcoral - tiny marine animals with hard exoskeletonscoral reef - a large grouping of coral, typically occurring in warmer seas and teeming with sea life crab - crustacean with five sets of legs that include one set of pincersdolphin - sociable sea mammal that is a small whaleelephant seal - large breed of marine mammalflying fish - tropical fish with large, winglike fins that appears to fly over the top of the water when it jumps outgiant squid - deepwater fish that can grow to an extremely large sizejellyfish - a gelatinous clear-colored aquatic invertebrate with stinging tentacleslobster - large, cylinder-shaped marine crustacean with five sets of legs including one set of pincersmanatee - large, plant-eating, aquatic mammalmollusk - invertebrate, often with a shelloctopus - cephalopod mollusk with eight legsotter - semi-aquatic mammal related to the weaseloyster - shelled bivalve mollusk with a rough shellsea turtle - ocean reptile with a leathery shellsea anemone - aquatic invertebrate with a column shaped body and tentaclessea urchin - spiny sea creatureseagull - commonly used name for gullsseahorse - marine fish that swims uprightshark - predatory saltwater fishshrimp - small marine crustaceansponge - marine cellular organisms with porous bodiesstingray - flat cartilaginous fishwalrus - large sea mammal with tuskswhale - large marine mammal When you talk about oceans, here's where it gets a little tricky. There is actually only one global ocean. However, there are five basins, which you call the oceans. These are Arctic, Atlantic, Indian, Pacific, and Southern oceans. While you might think there are only seven seas, there are a lot more. There are actually more than 50 seas in the world. Some of the seas you might find include: Andaman Sea - near Myanmar and ThailandArabian Sea - in the Indian Ocean near Iran and PakistanBarents Sea - in the Arctic Ocean off the coasts of Norway and RussiaBeaufort Sea - in the Arctic Ocean off the coasts of Northwest Territories, Alaska, and YukonBering Sea - in the Pacific Ocean dividing The Americas and EurasiaCaribbean Sea - in the Atlantic Ocean in the Western Hemisphere's tropicsChukchi Sea - in the Arctic Ocean near the Beaufort SeaCoral Sea - South Pacific sea off the northeast coast of Australialaonian Sea - in the Mediterranean near Southern Italy, Greece, and the Adriatic Sealrish Sea - sea separating Ireland from Great BritainJava Sea - sea near Borneo and JavaKara Sea - Arctic sea located north of SiberiaLaptev Sea - Arctic sea off the northern coast of SiberiaMediterranean Sea - Atlantic sea almost completely surrounded by the Mediterranean BasinNorwegian Sea - Arctic sea northwest of NorwayPersian Gulf - Mediterranean sea off the coast of the Arabian PeninsulaPhilippine Sea - sea off the east coast of the PhilippinesSalton Sea - saline lake in California along the San Andreas FaultSea of Okhotsk - Pacific sea near Kamchatka and the Kuril IslandsSouth China Sea - Pacific sea off the southeastern coast of ChinaSulu Sea - sea off the southwestern coast of the PhilippinesTasman Sea - South Pacific sea between New Zealand and AustraliaWeddell Sea - sea in the Southern Ocean near the Antarctic PeninsulaYellow Sea - Western Pacific sea near China and the Korean Peninsula While an ocean is made up of water, it connects with a land mass eventually. It might connect with small land masses to create a series of islands like the Pacific Islands. Or, it might connect with one of the seven continents. Where the ocean meets land, you have a beach. Not only are those beaches filled with creatures, but you can find other fun ocean landforms and words, such as:cliff - rock facecoast - the edge of a land mass where it meets the seaoastal - along the coast or near the coastcoastline - the outline of a coastcontinental shelf - shallow seabed near a land massdriftwood - wood that floats in the ocean or has been washed ashoreebb tide - period between high tide and low tide when water flows away from the shoreforeshore - shore closest to the waterhigh tide - when the tide has come the farthest in it will comeinland - areas of land away from the coastinshore - in towards the shorelow tide - when the tide is the farthest out it will goonshore - on landPacific Islands - islands in the Pacific Ocean including Polynesia, Micronesia, and Melanesiaeaseashell - any shell found on the beachsea spray - aerosol particles of sea water, mostly from the movement of wavesshore - the coastshoreline - line where the sea meets the landtidal wave - large, irregular wavewave - rolling motion in the surface of water Since you can't walk on water, you have to navigate the ocean somehow. Thankfully, there are all kinds of fun ocean vehicles you can come across. Just a few of the boats or ships you might encounter in an ocean include: barge - large, flat boat used for carrying freightcontainer ship - ship carrying cargo stored in containerscruise ship - large ship carrying travel passengers; a floating hotelfishing boats - crafts used in fishingsailboats - watercraft propelled by sailssubmarine - boat that submerges and travels fully underwatertanker - ship that carries liquid cargo in bulk tankstrawler - boat used for trawling (net fishing)yacht - large pleasure watercraft The ocean is full of unique and interesting things, from the saltwater itself to the creatures found above and below the surface. Considering much of the ocean is undiscovered, it kind of makes you want to dive right in and explore it. Thankfully, you can. Right from the comfort of your own home through ocean and sea examples.
